

Subsequent Logins to HEC Systems

Category: Security & Logging In

Once you successfully enable your RSA SecurID fob and log in for the first time to one of the secure front-ends (sfe[1-4]), you can follow one of the approaches below for subsequent logins to the systems in the secure enclave:

- Two-Step Connection Using Password+SecurID for the SFEs
 - ◆ This is the quickest and easiest way to access the SFEs and then connect to any of our systems without doing any extra setup.
- Two-Step Connection Using Publickey+SecurID for the SFEs
 - ◆ This method requires that you first set up public key authentication. Once that is done, you can use SecurID + Public key to access the SFEs and then connect to any of our systems in two steps.
- One-Step Connection Using Publickey and Passthrough
 - ◆ This method requires that you first set up public key authentication and set up SSH passthrough. Once this is done correctly, you can access any of the systems in what appears to be a single step.
